

ROHDE & SCHWARZ

Fast & Accurate
 μ P-controlled error correction

Millivolt- meter URV 5

DC, 9 kHz to 18 GHz

200 μ V to 1000 V
1 nW to 2 kW (50 Ω)
-60 to +63 dBm (50 Ω)
0 to 400 V DC

IEC 625 Bus

IEEE 488

USES, CHARACTERISTICS

Millivolt-meter URV 5

DC, 9 kHz to 18 GHz/200 µV to 1000 V

- Two test inputs
- Unexcelled accuracy through µP-controlled error correction: $\pm 1\%$
- Voltage, level and power measurement; tendency indication
- Probes, insertion units and power sensors may be exchanged as required
- Readout in all conventional units with freely selectable reference impedance: relative measurements
- Frequency-dependent calibration factors are taken into account
- DC output (option)

Scale 1:2.5

The Millivoltmeter URV 5 is a broadband, sensitive voltage, level and power meter featuring high accuracy and suitable both for manual operation and for use in systems. A great variety of measuring heads and accessories allows the URV 5 to be used for all kinds of measurement:

- With RF probe and DC probe for no-load AC and DC voltage measurements in electronic circuits.
- Voltage (and power) measurements in coaxial 50-Ω and 75-Ω systems using the low-reflection and low-loss insertion units (up to 2 GHz).
- Power measurement up to 18 GHz using the power sensors of Power Meter NRV.

Readout One or two measuring heads can be connected to the URV 5. The values measured in the two channels can be displayed separately, set off against one another or referred to any reference (A, B, A/B, B/A, A/REF_A, B/REF_B). For absolute measurement, four different units can be selected:

volt V watt W dBm dBV

In the case of **relative measurements**, the difference, the difference in percent, the logarithmic difference or the ratio is indicated (ΔV , ΔW , $\Delta \%$, ΔdB , X/REF).

Tendency indication The Millivoltmeter has a fast tendency indication which follows the variations of the measured values, thus facilitating adjustments and maxima-minima settings.

Measurement rate With a test rate of up to 30 measurements/s, the URV 5 is ideally suited for use in systems. For applications requiring a noise-free indication rather than a high measurement rate, the results can be filtered, the measurement rate being then reduced accordingly. The measurement rate can be set in six steps via the filter functions (F0 to F5).

Waveform weighting The rectifiers used in the AC voltage measuring heads handle an extremely wide dynamic range of the input voltage of more than 90 dB. The partly non-linear transfer characteristic is individually linearized, so that for sinewave voltages the rms value is always read out. Non-sinewave voltages up to about 30 mV are also measured with rms weighting, whereas for voltages above 1 V the result is read out as $V_{pp}/2\sqrt{2}$ (peak weighting). If dividers are connected ahead of the measuring heads, the specified limits are shifted upwards (300 mV and 10 V for 100-V insertion units).

PEP measurement The PEAK (PEP) key is used for reading the peak envelope power of a modulated signal. Signals with a minimum pulse width of 200 µs and pulse repetition frequencies down to 0.05 Hz can be measured in this mode.

Frequency-response correction Each measuring head is individually calibrated. The test frequency need only be entered via the keyboard or IEC/IEEE bus and the URV 5 will take account of the calibration factor in the measurement result.

Attenuation correction The URV 5 automatically takes account of the division factors of the measuring heads. If a plug-on divider or attenuator pad is connected ahead of the measuring head, the corresponding attenuation can be entered and will be taken into account in the result.

Data input Upon pressing the SHIFT key, a decimal keypad is available to the user for data entry or for calling up **special functions**, such as:

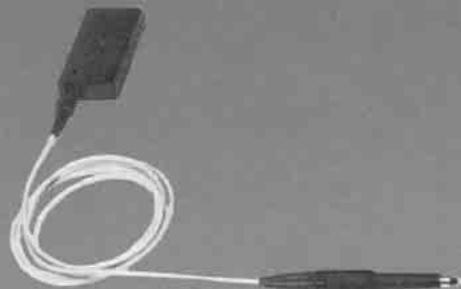

- display test,
- entry and checking of IEC/IEEE-bus address,
- nonvolatile storage of reference values,
- selection of filters F0 to F5,
- indication of calibration date/recalling of calibration routines,
- transfer of reference value channel A to B and vice versa.

DC output (option) This option delivers a DC voltage proportional to the numerical readout. Thanks to the versatile conversion capability of the URV 5, the scale can be linear or logarithmic.

MEASURING HEADS

The measuring heads are individually calibrated and therefore interchangeable without affecting the error limits.

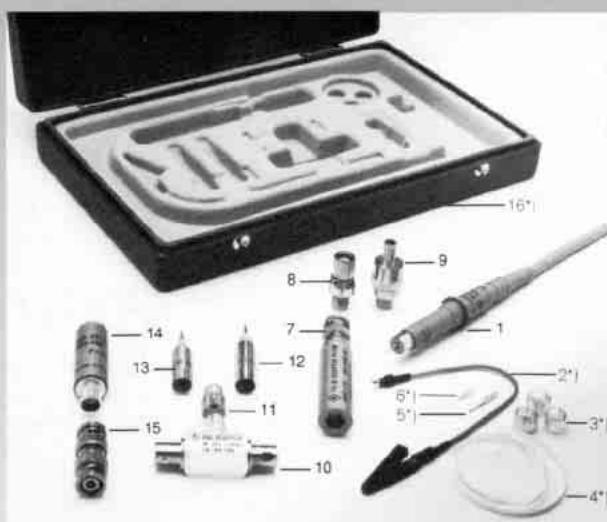

URV 5-Z1 DC Probe
0 to 400 V, $R_{in} = 9 \text{ M}\Omega \parallel 6 \text{ pF}$

DC probe

URV 5-Z7 RF Probe with ground cable and clip, ground sleeve, ground strip, hook tip and solder tip

- without plug-on divider
200 μV to 10 V, 20 kHz to 1 GHz
- with 20-dB plug-on divider (URV-Z6)**
2 mV to 100 V, 1 to 500 MHz
- with 40-dB plug-on divider (URV-Z6)**
20 mV to 1000 V, 500 kHz to 500 MHz
- with BNC adapter (URV-Z6)** with or without plug-on divider, for voltage measurement on 50- Ω coaxial lines
- with 50- Ω adapter (URV-Z50)**
200 μV to 10 V, 20 kHz to 1 GHz
RF voltage measurement with integrated termination in 50- Ω coaxial systems
- with 75- Ω adapter (URV-Z3)**
200 μV to 10 V, 20 kHz to 500 MHz
RF voltage measurement with integrated termination in 75- Ω coaxial systems (adaptable connectors)

RF probe (1) with accessories: ground cable and clip (2); ground sleeve (3); ground strip (4); hook tip (5); solder tip (6); 75- Ω adapter (7) with BNC adapter, adapter to 1.6/5.6 connectors (8) and to 2.5/6 connectors (9); BNC adapter (10) with reducer sleeve (11) for plug-on dividers (12, 13); 50- Ω adapter (14) with BNC adapter (15) to BNC connectors, case (16).

*) supplied with RF Probe URV 5-Z7

URV 5-Z9

Dual Directional Coupler, 50 Ω

100 kHz to 80 MHz, 10 μW to 2 kW

Coupling of forward and reflected power; in conjunction with two RF Probes URV 5-Z7 for measurement of directional power and reflection

Dual directional coupler

URV 5-Z2

10-V Insertion Unit, 50 Ω

200 μV to 10 V

9 kHz to 2 GHz (model 55)

9 kHz to 1 GHz (model 04)

RF voltage measurement with **low reflection coefficient** in 50- Ω coaxial systems

10-V insertion unit

URV 5-Z4

100-V Insertion Units, 50 and 75 Ω

2 mV to 100 V

100 kHz to 2 GHz, 50 Ω (model 55)

100 kHz to 1 GHz, 50 Ω (model 04)

100 kHz to 2 GHz, 75 Ω (model 75)

RF voltage measurement in 50- Ω and 75- Ω coaxial systems for higher voltages and with extremely low reflection coefficient; power measurements up to 200 W (130 W) possible with suitable termination

NRV-Z1

1-nW Power Sensor, 50 Ω

1 nW to 20 mW, 10 MHz to 18 GHz

NRV-Z2

Precision Power Sensor, 50 Ω

100 nW to 500 mW, 10 MHz to 18 GHz

VSWR < 1.05 up to 4 GHz, < 1.2 up to 18 GHz

NRV-Z3

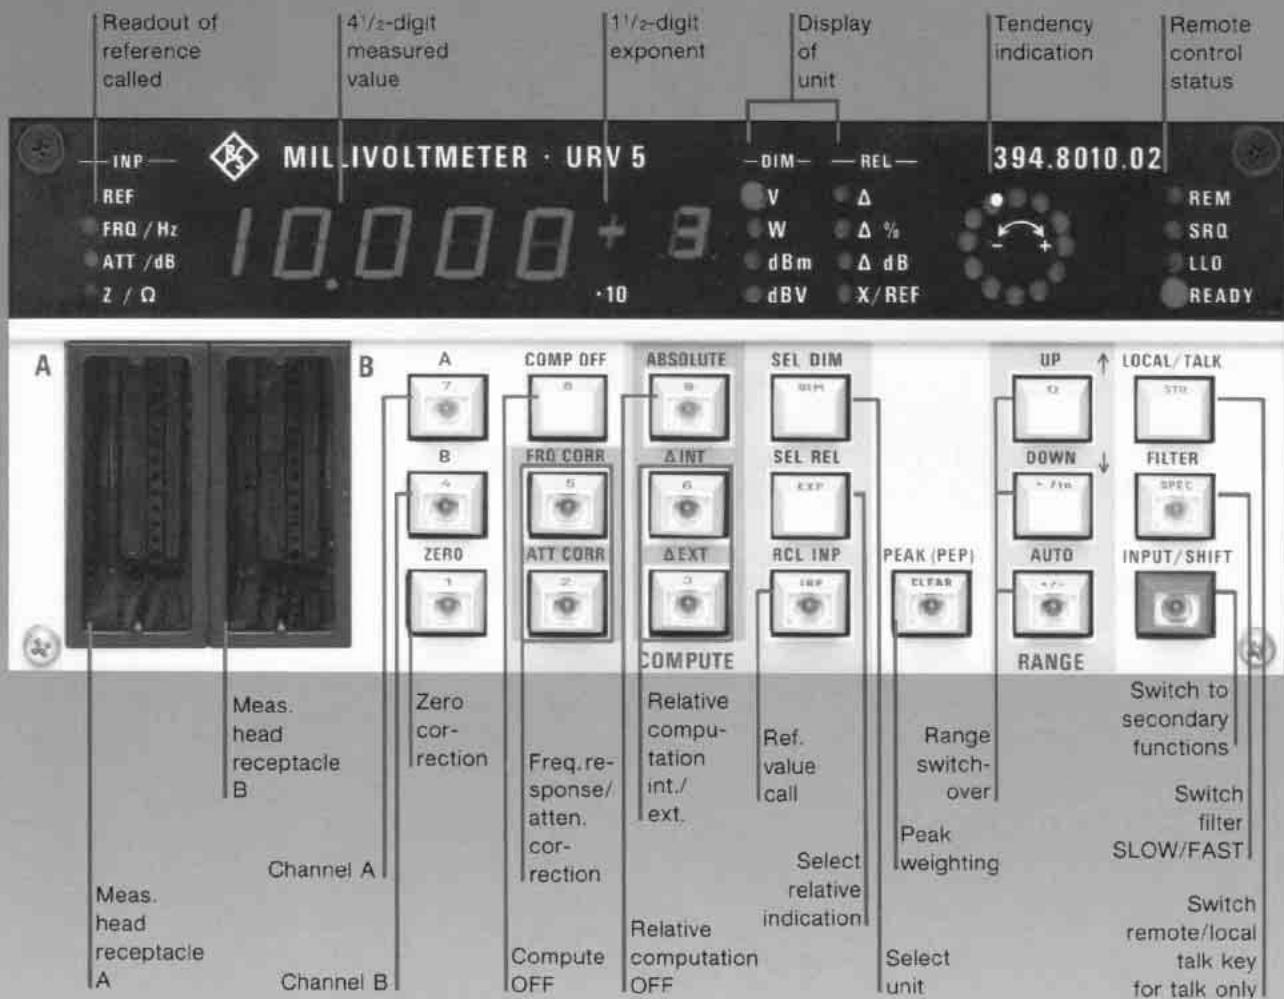

400-pW Power Sensor, 75 Ω

400 pW to 13 mW, 1 MHz to 2.5 GHz

Power sensor

PROGRAMMING

Input pointer

| Command code | Function |
|--------------|--|
| IA IB | Input for channel A valid Input for channel B valid Note: With commands marked by * it is possible to define the input channel — independent of the selected measurement channel — for all subsequent commands by sending IA or IB once in the command string (resetting by delimiter or PA, PB) |
| | |

Setting commands

| Command code | IA IB | Function |
|--|----------|---|
| C0 | * | Reading in of test data into basic unit (= DCL-SDC after addressing) |
| C1 | * | Basic setting: PA (PB), E0, F2, KA0, KF0, RG0, U0, ..., H0, N0 Q0, W3, Y1 Note: Resetting of input pointers IA, IB |
| E0 E1 | * | Off On PEAK (PEP) measurement |
| F0 F1 F2 F3 F4 F5 | * | SLOW { 4½-digit display FAST 3½-digit display SUPERFAST |
| KF0 KF1 KA0 KA1 | * | FRQ CORR off FRQ CORR on ATT CORR off ATT CORR on (It is also possible to send KF01 instead of e.g. KF1) |
| N0 N1 | * | Output with Output without alpha header |
| O1 | * | Triggering ZERO meas |
| PA PB | * | Probe A Probe B Setting of measurement channel Note: Resetting of input pointers IA, IB |
| RG, RG0 RG1 RG2 RG3 RG4 | * | Autorange 10 mV 100 mV 1 V 100 mV 1 V 10 V 1 V 10 V 100 V 10 V 100 V 1000 V AC probe, 100-V DC probe 10-V insertion units (It is also possible to send RG03 instead of e.g. RG3) |
| U0 U1 U2 U7 | * | V dBm dBV W Output unit (ABSOLUTE) |
| U3 [W] [X] U4 [W] [X] U5 [W] [X] U6 [W] [X] | * | Δlin Δ% ΔdB X/Ref { in V referred to internal reference value Output unit (relative) |
| Y0 Y1 YX | * | off on Triggering Cyclical temperature measurement |
| Y? | * | Read-out of set status, i.e. if cyclical temperature measurement is switched on or off (output via SRQ) |

Data input commands

| | | | |
|--|---|--|------------|
| DU (DATUM) DV (DATUM) DB (DATUM) DM (DATUM) DW (DATUM) DR (DATUM) | * | Reference value in V Reference value in V Reference value in dBV Reference value in dBm Reference value in W Reference impedance in Ω | Data input |
|--|---|--|------------|

Data input commands (continued)

| Command code | IA IB | Function |
|--------------------------|----------|--|
| DZ (DATUM) | * | Reference impedance in Ω |
| DA (DATUM) DF (DATUM) | * | Correction attenuation in dB Correction frequency in Hz |
| D - AA D - BB | * | Data copying to channel IA, IB Data copying values B same as in channel A Data copying values A same as in channel B |

Interface commands

| | | | |
|--|---|---|------------------------------|
| W0 W1 W2 W3 W4 W5 W6 W7 W8 | * | NL CR ETX W3 - CR - NL W4 - EOI W5 - EOI W6 - EOI W7 - ETX - EOI W8 - CR - NL - EOI | Delimiters for string output |
| Q0 Q1 Q2 Q3 | * | off on (all SRQ) on (except for SRQ (80) = meas. value ready, all SRQ (only error SRQ, 1= 96)) on | Call of SRQ |
| H0 H1 | * | off on Auxiliary mode (PET time-out correction) | |

Trigger commands

| | | |
|----------------------------------|---|--|
| X0 X1 X2 X3 X4 X8 | * | Reset command for commands X3/X4 Trigger command (= GET) Trigger command + storage of measured value as reference value Setting command for triggering measurement upon a service request Setting command for continuous triggering Trigger command for both measurement channels (measured values are separated by delimiters [corresponding to W0 to W8]) |
| Z0 Z1 Z2 Z3 | * | Output of reference value Output of reference impedance Output of correction frequency Output of correction attenuation |

Special commands

| | | |
|----------------------------|---|--|
| S0 S4 S5 S6 ST | * | LED test of display Indication of date under which the calibration values have been stored Output of error code according to hardware function errors occurred Checksum output of program memory Status output of all device settings for the selected channel |
|----------------------------|---|--|

Keywords

| | |
|-------------|--|
| CALIBRATION | Switchover between measurement and calibration mode; only commands for calibration are valid (CA-) |
|-------------|--|

Separators and delimiters

| Symbol | Designation | ASCII decimal equivalent | Recommended use |
|--------|--|--------------------------|----------------------------|
| , | Comma | 44 | Separator between commands |
| CR | Carriage Return New Line | 13 10 3 | Delimiters |
| EOI | If the EOI line is set during the transfer of the last character, this is also accepted as delimiter | | |

SPECIFICATIONS

Basic Unit

(Unless otherwise stated, all specifications refer to voltage readout in V)

| | | | |
|-------------------------------------|--|--|--|
| Test channels | 2 (A and B), independent of each other, separately adjustable | Frequency response correction | can be selected for all AC voltage and power measuring heads; frequency response of measuring head is accounted for after entry of test frequency; one frequency per channel can be entered |
| Measuring heads | all intelligent measuring heads for URV 5 and NRV can be used | Attenuation correction | can be switched on for all measuring heads; one attenuation value per channel can be entered (-199.99 to +199.99 dB) |
| Measurement range | > 94 dB (4 ranges in 20-dB steps) | Reference values | one reference value per channel for relative measurements (REF _{REL}) |
| Measurement mode | A, B A/REF _{REL} , B/REF _{REL} , A/B, B/A | Reference impedance | entry via keyboard, IEC/IEEE bus or transfer of measured value for computation and indication of power and power level, one value per channel can be entered (10 ⁻⁴ to 10 ⁴ Ω) |
| Readout mode | V, W, dBm, dBV ΔV, ΔW, Δ%, ΔdB, X/REF | Remote control interface | automatic initialization with impedance value (50/75 Ω) of power sensors for NRV and insertion units URV 5-Z2/-Z4 |
| absolute | $\pm 19.999 \times 10^{-12}$ | Interface functions | IEC 625-1 (IEEE 488) for control of all device functions: SH1, AH1, TS, L4, SR1, RL1, DC1, DT1, PP1 |
| relative | 0.01% (0.1%) ¹⁾ of nominal measurement range with readout in V; 0.01 dB with readout in dBm, dBV or ΔdB; 0.01% with readout in Δ% | General data | Operating temperature range 0 to +50°C, class I to IEC 369 (no dewing) |
| Display range | 0.015% of rdg per channel | Storage temperature range -40 to +70°C | Power supply 100/120/220/240 V ± 10% |
| Resolution | 0.015% of rdg per channel | Dimensions, weight | 47 to 63 Hz; 400 Hz (30 VA) 241 mm × 110 mm × 340 mm, 4.4 kg |
| Error limits | ± 0.15% of rdg per channel | Option DC Output URV 5-B2 | 1 kΩ |
| 18 to 28°C | | Output impedance | -1.999 to +1.999 V |
| Additional error due to temperature | | Output voltage range (EMF) | 1 mV (10 digits) |
| 10 to 40°C | ± 0.25% of rdg per channel | Resolution | ± 2 mV |
| 0 to 50°C | ± 0.5% of rdg per channel | Error | |
| Filter | for reduction of display noise, adjustable ²⁾ in 6 steps (F0 to F5) via keyboard or remote-controlled, duration approx. 4 s ³⁾ | | |
| Zero adjustment | approx. 1 measurement/s with filter F0 up to 30 measurements/s with filter F5 ³⁾ | | |
| Measurement rate (manual) | approx. 0.05 s with filter F5 up to 20 s with filter F0 ⁴⁾ ; with dual-channel measurement sum of the individual times as maximum, no switchover delay; all measurements triggered via IEC/IEEE bus are in steady state, even in case of range switchover | | |
| Measurement time (IEC/IEEE bus) | | | |
| PEP measurement | Pulse width approx. 200 μs to CW | | |
| | Minimum pulse repetition frequency | | |

- ³⁾ With filters F0 to F4.
- ⁴⁾ Without range switchover, 1 channel.
- ⁵⁾ The additional error due to temperature stated in the additional data may be exceeded at temperatures above 28 °C.
- ⁶⁾ +3% for 1 to 10 V.
- ⁷⁾ With frequency response correction (linear interpolation between calibration frequencies).
- Calibration frequencies: 32/40/50/64/80/100/120/160/200/250/320/400/500/600/700/800/900/1000/1100/1200/1300/1400/1500/1600/1700/1800/1900/2000 MHz
- 1100 to 2000 MHz models 55 and 75 only.
- ⁸⁾ Without frequency response correction.
- ⁹⁾ +5% for 10 to 100 V.
- ¹⁰⁾ +7% for 1 to 10 V.
- ¹¹⁾ With frequency response correction (linear interpolation between calibration frequencies).
- Calibration frequencies: 32/40/50/64/80/100/120/160/200/250/300/350/400/450/500/550/600/650/700/750/800/850/900/950/1000 MHz.

SPECIFICATIONS, ORDERING INFORMATION

Measuring heads and measurement functions (continued)

AC voltage measurement

Measurement rate

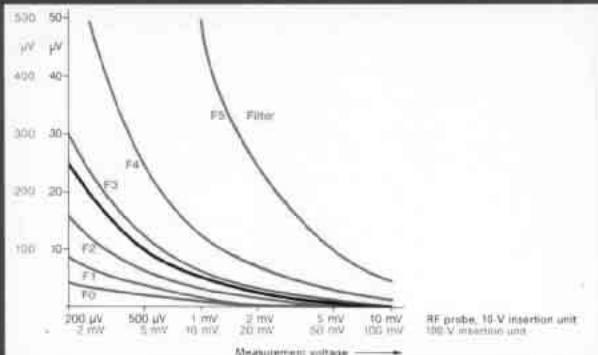

| Filter | F0 | F1 | F2 | F3 | F4 | F5 |
|--|------|-------|-------|--------|--------|---------|
| Measurement rate (manual operation) | 1/s | 1.5/s | 3/s | 5/s | 10/s | 16/s |
| Measuring time (IEC/IEEE bus), trigger to output of 1st byte | 22 s | 5.5 s | 1.4 s | 0.36 s | 0.10 s | 0.065 s |

Red curves: display noise⁽¹²⁾ (double standard deviation, observation time 1 min, temperature of measuring head 18 to 28 °C, approx. double values at 0 °C)

Black curve: zero error⁽¹³⁾ (1 h after zero adjustment, ±1 °C; after warmup of 2 hours with measuring head connected)

Additional error due to temperature
10 to 40 °C ±2% of rdg
0 to 50 °C ±5% of rdg

— additional data

Directional power and reflection measurement — using Dual Directional Coupler URV 5-Z9 and 2 RF Probes URV 5-Z7

Level/power measurement range -20 to +63 dBm/10 μW to 2 kW

Minimum forward power required for reflection measurements 50 mW (17 dBm)

Frequency range 100 kHz to 80 MHz

Characteristic impedance 50 Ω

Coupling (nominal value) 40 dB

Error limits in dB for forward power measured with reflection-free load (18 to 28 °C)

| 0.1 | 0.2 | 0.4 | 30 | 50 | 80 MHz |
|---------|-----------|-------|-------|-------|--------|
| ±0.20 | ±0.15 | ±0.10 | ±0.15 | ±0.20 | [12] |
| -1/+0.2 | -0.4/+0.2 | ±0.2 | ±0.35 | ±0.8 | [14] |

Display noise and zero error see page 7 (RF probe), taking into account the coupling

Additional error due to temperature incl. RF Probe URV 5-Z7

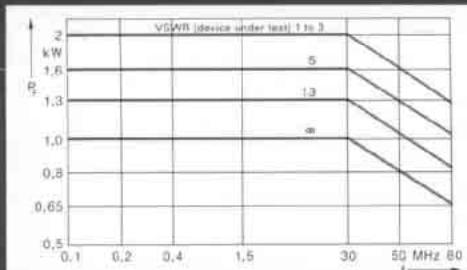

10 to 40 °C ±0.2 dB

0 to 50 °C ±0.5 dB

Minimum directivity in dB (typ. values in parentheses)

| 0.1 | 0.2 | 0.4 | 30 | 50 MHz | 80 |
|--------|--------|--------|--------|--------|----|
| 23(30) | 28(35) | 35(40) | 30(35) | 20(30) | |

Insertion loss ≤ 0.015 dB
Reflection coefficient 0.1 to 30 MHz ≤ 1% (VSWR ≤ 1.02)
30 to 80 MHz ≤ 1.5% (VSWR ≤ 1.03)
Max. permissible forward power P_f see diagram

General data
Connectors N male, N female
Dimensions, weight 118 mm × 102 mm × 45 mm, 0.5 kg
Temperature range see basic unit URV 5

Power measurement

See page 3, detailed information in data sheet 828251 of Dual-channel Power Meter NRV

— using Power Sensors NRV-Z1/-Z2/-Z3

Ordering information

Order designation ► Millivoltmeter URV 5
394.8010.02
Option DC Output URV 5-B2 395.0112.02
